APR-DRG Table of Weights and Thresholds and Inpatient Pricing Calculator

3M™ APR DRG Grouper V29.0

Effective with dates of admission October 1, 2008, the Montana Department of Public Health and Human Services (DPHHS) moved to a new method of paying for hospital inpatient services based on All Patient Refined Diagnosis Related Groups (APR-DRGs). Our goals are to implement a DRG grouper appropriate to Medicaid, reduce complexity, improve incentives, and reduce reliance on Medicare cost reports.

This document includes an Excel spreadsheet that allows you to enter claim values and determine expected payment levels. A downloadable file is available on our website at www.mtmedicaid.org. On the left side of the page, choose "Resources by Provider Type," then "Hospital (Inpatient)," then "New APR-DRG Payment Method" near the bottom of the page. You will also find a set of Frequently Asked Questions about the new method and an APR-DRG Table of Weights and Thresholds.

Although the spreadsheet is intended to replicate pricing within the Montana Medicaid claims processing system, please note that in cases of difference the claims processing system will be taken as correct. In particular, the complexity of edits related to beneficiary eligibility, prior authorization, and covered services cannot be captured in a single spreadsheet.

Montana Medicaid APR-DRG Table of Weights and Thresholds

Effective July 1, 2013

3M™ APR DRG Grouper V29.0

Notes

1. The Gross DRG Amount (i.e., DRG base payment) equals the relative weight times the base price.

2. Base prices are $4,742 for general hospitals, $7,725 for designated specialty referral centers and $4,742 for designated rehabilitation units and long-term acute care hospitals.
3. For the convenience of readers, the spreadsheet shows the Gross DRG Amount for each stay when the base price is $4,742.
4. For pediatric mental health patients (< 18 years old) the Gross DRG Amount is increased by an age adjustor of 1.51.
5. ALOS figures refer to the nationwide average length of stay for each DRG. This information is used to adjust payments for acute care transfer cases and cases where the beneficiary has Medicaid eligibility for less than the full stay.
6. The cost outlier threshold information is used in calculating whether a stay is eligible for a cost outlier payment. See the pricing example spreadsheet listed above.
7. This table shows information for 1,258 DRGs (314 base DRGs, each with four levels of severity, plus two error DRGs).
8. This spreadsheet includes data obtained through the use of proprietary computer software created, owned and licensed by the 3M Company. All copyrights in and to the 3M™ Software are owned by 3M. All rights reserved.
