# Montana Medicaid APR-DRG Table of Weights and Thresholds

Effective October 1, 2008

## Notes

- Effective with dates of admission starting October 1, 2008, the Montana Medicaid program will implement a new payment method for inpatient hospital services. The new method is based on All Patient Refined Diagnosis Related Groups (APR-DRGs). For more information, including frequently asked questions, pricing examples and a downloadable Excel pricing calculator spreadsheet, go to [www.mtmedicaid.org](http://www.mtmedicaid.org), choose "Resources by Provider Type," then "Hospital (Inpatient)," then "New APR-DRG Payment Method" (near the bottom of the page).
- The Gross DRG Amount (i.e., DRG base payment) equals the relative weight times the base price.
- Base prices are \$4,129 for general hospitals, \$6,890 for designated specialty referral centers and \$9,092 for designated rehabilitation units and long-term acute care hospitals.
- For the convenience of readers, the spreadsheet shows the Gross DRG Amount for each stay when the base price is \$4,129.
- For pediatric mental health patients (< 18 years old) the Gross DRG Amount is increased by an age adjustor of 1.51.
- ALOS figures refer to the nationwide average length of stay for each DRG. This information is used to adjust payments for acute care transfer cases and cases where the beneficiary has Medicaid eligibility for less than the full stay.
- The cost outlier threshold information is used in calculating whether a stay is eligible for a cost outlier payment. See the pricing example spreadsheet listed above.
- This table shows information for 1,258 DRGs (314 base DRGs, each with four levels of severity, plus two error DRGs).
- This spreadsheet includes data obtained through the use of proprietary computer software created, owned and licensed by the 3M Company. All copyrights in and to the 3M™ Software are owned by 3M. All rights reserved.
